

Find the failure before it becomes an outage — or a claim.

AERIAL AI THERMAL INTELLIGENCE · DATA CENTERS & THE GRID

We fly your facility, our AI finds and ranks every thermal and structural problem, and you get a report in 48 hours — then we baseline it and track the trend. The same report owners maintain on, insurers underwrite on, and lenders close on.

THE DELIVERABLE

Not footage. Not a dashboard login. A geolocated, severity-ranked findings document — each anomaly classified against NFPA 70B and ASHRAE thresholds, with a recommended action and a 48-hour target. Re-scans on cadence track degradation velocity into a living condition-of-record.

WHAT WE SCAN

Data centers · Energy & the grid

ALSO FLYING: PERIMETER SECURITY · REAL ESTATE · AGRICULTURE · MARITIME

WHY JINKI

- + AI-ranked radiometric thermal at 0.5°C — full array, single aerial pass.
- + Emergency repairs run 4–8× planned ones; one prevented outage pays for years.
- + Founder-led: CISSP, CCSP, AIGP, AAISM, AAIR; former cyber risk senior consultant at Deloitte.
- + \$5M liability per operation · mutual NDA · AES-256 · on-premises processing available.
- + FAA Part 107 · authorized in the DC Special Flight Rules Area, where most can't fly.

THE FOUNDING ENGAGEMENT

Founding Scan — one mission at founding-cohort terms: full facility pass, severity-ranked report on a 48-hour target, zero integration. We baseline it; re-scans build the condition-of-record owners, insurers, and lenders rely on.
